VALLEY REHAB & PHYSICAL THERAPY - RE-EVALUATION
Patient: Morgan Ellis DOB: 04/11/1985
Date: 04/14/2026 Therapist: Priya Nair, PT, DPT
Date of Injury: 01/09/2026

SUBJECTIVE:
Neck pain 5/10, arm symptoms intermittent. Low back pain 2/10. Headaches 2 to 3 times per week. She can now drive short distances on surface streets but still avoids the freeway. She can lift her
son briefly but needs to sit down to do it. She tried carrying a laundry basket upstairs and had a
flare-up lasting 3 days.

OBJECTIVE:
Cervical AROM: Flexion 40 degrees, extension 40 degrees, rotation right 65 degrees, left 60 degrees.
Deep neck flexor endurance 18 seconds.
Lift test: 15 pounds floor to waist with neck pain increase to 7/10.

OUTCOME MEASURES:
Neck Disability Index: 30% (moderate disability), improved from 44%.
Oswestry Disability Index: 14% (minimal disability), improved from 32%.

ASSESSMENT:
Progress toward goals is slower than expected due to persistent cervical radiculopathy. Lumbar goals
nearly met. Cervical goals not met. Patient remains unable to perform the lifting and overhead demands of her job.

PLAN:
Continue physical therapy 2 times per week for 6 more weeks, focusing on cervical stabilization,
graded lifting, and work conditioning.

Signed: Priya Nair, PT, DPT 04/14/2026
