VALLEY REHAB & PHYSICAL THERAPY - DISCHARGE SUMMARY
Patient: Morgan Ellis DOB: 04/11/1985
Date: 06/02/2026 Therapist: Priya Nair, PT, DPT
Date of Injury: 01/09/2026 Episode of care: 01/20/2026 to 05/28/2026

SUMMARY OF CARE:
Patient attended 34 of 40 scheduled visits. Missed visits were due to pain flare-ups, the epidural injection, and child care conflicts. Treatment included manual therapy, cervical stabilization, nerve glides, lumbar stabilization, graded lifting, and work conditioning.

STATUS AT DISCHARGE:
Neck pain 4/10 at rest, 6/10 after lifting or prolonged computer work. Low back pain 1/10.
Headaches 1 to 2 times per week. Intermittent right hand numbness.
Cervical rotation: right 70 degrees, left 65 degrees.
Lift: 25 pounds floor to waist with mild neck pain; unable to lift 40 pounds or work overhead for more than 1 minute.
Neck Disability Index: 22% (moderate disability). Oswestry Disability Index: 6%.

GOALS:
Pain 3/10 or less: not met. Cervical rotation 70 degrees: partially met. Lift 30 pounds: not met.
NDI below 20%: not met.

ASSESSMENT:
Patient made meaningful gains but has residual cervical pain, radicular symptoms, and lifting limitations that are likely to persist. She has plateaued with skilled therapy at this time.

RECOMMENDATIONS:
Discharge to independent home exercise program. Recommend lifting restriction of 25 pounds and no
repetitive overhead work on return to work. Re-referral to therapy if symptoms worsen.
